

Public Consultation in relation to the REACH REFIT evaluation

Fields marked with * are mandatory.

1) Purpose and Context of the Consultation

a) The REACH REFIT evaluation

REACH[1] is the European Regulation for the Registration, Evaluation, Authorisation and Restriction of chemicals (EC) No 1907/2006. It is the main EU law on chemicals, covering substances on their own or in mixtures or in articles for industrial, professional or consumer use[2].

The European Commission (DG Internal Market, Industry, Entrepreneurship and SMEs and DG Environment) is conducting an evaluation of the REACH Regulation as part of the regular reporting obligation to monitor progress in the achievement of the objectives of the Regulation according to Article 117 (4) of REACH. Regular monitoring and reporting provides information to identify needs for adjustment and to propose recommendations to improve the implementation of the Regulation or the need to consider modifications.

This evaluation is part of the Commission's Regulatory Fitness and Performance Programme (REFIT) [3] and will cover the five compulsory evaluation criteria: effectiveness, efficiency, relevance, coherence and EU added value, including examining the potential to improve the way in which it delivers on its objectives and the potential for burden reduction and simplification.

The roadmap[4] for the REACH REFIT evaluation outlines the objectives, scope and key evaluation questions to be addressed in the evaluation. Furthermore, the consultation strategy[5] for the REACH REFIT evaluation provides additional details about the consultation objectives, activities and tools planned, including the present open online public consultation.

The objective of the public consultation is to obtain stakeholder views on the general approach to the 2017 REACH REFIT evaluation and to collect stakeholder views on strengths and weaknesses of REACH as well as any potentially missing elements. The responses will be taken into consideration in the preparation of the Commission Staff Working Document, presenting the results of the REACH REFIT evaluation and the Commission general report on the functioning of REACH addressed to the European Parliament, the Council, the European Economic and Social Committee and the Committee of the Regions.

The current open online public consultation is part of a broader stakeholder consultation strategy which includes also an SME panel circulated through the Europe Enterprise Network. Please note that the results may also be used in the context of other studies in the chemicals field.

** The consultation will last for 12 weeks. Responses to the public consultation must be submitted by 28 January 2017. **

b) Structure of this questionnaire

The questionnaire has four parts and you may choose which parts (or questions) you answer depending on your interest and level of familiarity with the REACH legal text and its implementation:

Part I – General Information about respondents (compulsory)

Part II - General Questions for respondents interested in REACH, but who may not be familiar enough with the legal text and provisions to answer more detailed questions (compulsory)

Part III – Specific Questions which require more in-depth knowledge and experience in dealing with the REACH Regulation (optional)

Part IV – Additional Comments

You may interrupt your session at any time and continue answering at a later stage. Once you have submitted your answers online, you can download a copy of the completed questionnaire.

To facilitate the preparation of your contribution, a pdf version of the questionnaire is available [here](#).

In view of the limited resources for translation as well as the specialised nature of the topic and technical terminology involved in this consultation, the questionnaire is available in English, German and French. Individual replies may be provided in any EU language.

Privacy Statement: The information you provide will be used strictly in accordance with the provisions of Regulation (EC) No 45/2001 on the protection of individuals with regard to the processing of personal data by the Community institutions and bodies and on the free movement of such data. The content of your contribution and identity will be published on the Internet, unless you ask to remain anonymous.

13. Please identify unintended effects of REACH, indicating whether you consider those to be positive or negative. Please provide evidence to quantify such effects or a qualitative description.

(max. 5.000 characters)

We refer to the unintended negative effects described in the ASD response and the ASD-Eurospace "SPACE SECTOR CONTRIBUTION TO THE EC REACH REVIEW 2017 - POSITION PAPER" (Section 3). In particular, the following unintended negative effects of REACH are highlighted:

- Commercial obsolescence risks for space industry as a typical niche customer, stemming especially from REACH registration and authorisation requirements for SVHCs which are broadly used in the complex supply chains;
- Unpredictability with regard to SVHC regulation and application of exemptions challenges anticipation of obsolescence risks and taking correct design decisions during early phases of long-term programmes such as launcher and satellite platforms (e.g. risk of regrettable substitution, if the substitute would itself be banned in the future);
- Diversion of R&D budgets: The cost-intensive substitution R&D for SVHCs may have to be performed to the detriment of innovative R&D activities to make better performing, cost effective and competitive products.
- Short Annex XIV timelines as well as subsequent authorisation review periods not covering the full time needed for substitution - and hence more likely to require authorisation renewals - tend to affect high end niche sectors such as space at the end of complex and often global supply chains disproportionately, necessitating the double parallel effort of authorisation and replacement activities.
- Space industry dependence on upstream authorisations for broadly used chemicals (such as chromates);
- REACH Article 33 compliance for very complex articles (launchers, satellites, etc.) poses significant challenges;
- Specific (non-industrial) concern with regard to institutional customers: REACH status of governmental agencies.

14. In your view, to what extent are the following elements of REACH enforcement satisfactory?

	1 Not at all satisfactory	2 Rather unsatisfactory	3 Neutral	4 Rather satisfactory	5 Very satisfactory	Do not know / not applicable

REACH enforcement at Member States level	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>
REACH is enforced uniformly across the EU	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>

Prioritisation of enforcement activities at EU level (by Forum)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>

22.1. If you disagree with one or more of the statements above, where do you consider coherence should be enhanced?

(max. 5.000 characters)

We refer to the ASD response on this point and the ASD-Eurospace “SPACE SECTOR CONTRIBUTION TO THE EC REACH REVIEW 2017 - POSITION PAPER” (Section 4). In particular, we consider that coherence should be enhanced in the following areas:

- RMOA would benefit from EU-level harmonised guidelines (defined process and RMO selection criteria) which are applied by ECHA and the Member States.
- Selection criteria for Candidate List and Authorisation vs. Restriction should be defined.
- With regard to non-REACH instruments:
 - Define criteria where EU workplace legislation (namely: binding Occupational Exposure Limits) would be considered as sufficient / an exemption from authorisation according to REACH Article 58(2) for workplace-related uses would be valid;
 - Consider the status of an SVHC substance or its precursor as a Critical Raw Material (CRM) according to the related EC CRM policy during RMOA;
 - Consider compatibility of RMOs with the EC’s Circular Economy initiative during RMOA.
- Explore means of enhancing innovative substitution while minimizing the risk of regrettable substitution, such as:
 - Extended Annex XIV timelines to take into account longer product lifecycles (e.g. REACH Article 58(1)(c) foresees the possibility of use-specific sunset dates according to the “production cycle specified for that use”);
 - EU level funding for SVHC substitution R&D;
 - Improvements of regulatory predictability for SVHC regulation.

EU Added Value

23. To what extent do you consider that taking action through the different chapters of REACH has added value above what could have been achieved through action by Member States alone at national level? (1= no value, 5= a very high value)

We refer to the ASD response and the enclosed ASD-Eurospace “SPACE SECTOR CONTRIBUTION TO THE EC REACH REVIEW 2017 – POSITION PAPER”.

In relation to the number of responses “Do not know / not applicable” selected in this questionnaire response we would like to note that they may be either due to the fact that our industry does not have experience with the issue at hand due to its position in the supply chain or that individual views do exist, but could not be consolidated for a qualified response on a sector level within the given timeframe and/or due to the diverse industrial landscape. Individual companies may have submitted their own responses to this consultation.
